

08/23/25

Door was waving around, a bolt had come unscrewed from a threaded hole in the door. Managed to put it back in with adjustable wrench, tightened till the rounded end was in far enough that door slid back inside housing, then unscrewed a bit from the inside so that it won't slide back out. Adjusted weird washer piece to press against door.

Will still likely loosen up again. Maye should be checked on every 6 months or year or something.
