

Overview

As of June 2026, Ridgewood Common's digital infrastructure is spread across a number of hosted and self-hosted solutions that can be disorienting to navigate.

This includes:

- two different self-hosted **identity providers** (keycloak and authentik) on two different servers
- a self-hosted bookstack **wiki** on server A
- a self-hosted **static website** on server B
- **project management software** (vikunja) on server B that is way out of date [1]
- google and riseup **email accounts**
- a <https://purelymail.com/> account for sending password reset emails etc
- a <https://bitwarden.com/> **password manager** with a single root login account
- **web forms** on google and tally.so
- **spreadsheets** on google sheets that are used for coordinating programming bookings & a structured version of our weekly calendar.
- 30? signal groups for **group chat**
- instagram and bluesky for **social media**
- <https://www.patreon.com/> and <https://pools.events/> for **recurring donations**
- <https://pools.events/> for **event listing**

[1] we're currently at 0.24.6, while the latest is 2.3.0 . it is currently unknow what the migration path is across that many versions
